

# Git-based Courses

Carson Gee and Peter Pinch

# Peter Pinch

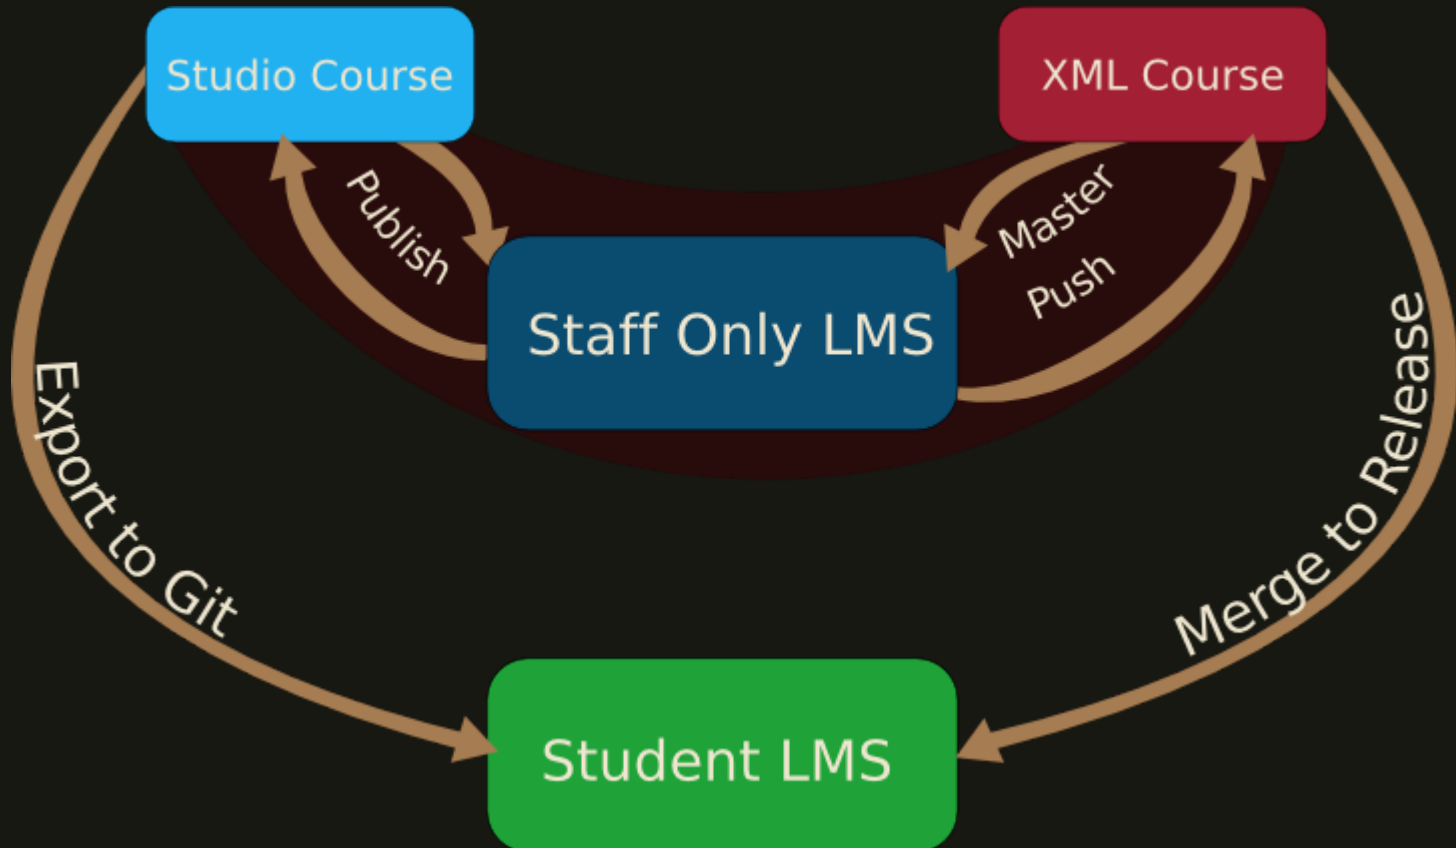

- education at scale
- pbs.org, pbslearningmedia.org
  - Ask me about animatronic aardvarks
- MIT OpenCourseWare
  - 2,240 courses and counting
- man of many hats at MITx

# Carson Gee

- Seriously into process automation
- Over a year with Open edX
- Over 100 PRs between platform and configuration
- Not serious about much else

# Git Course Flow Overview

# What We'll Cover

- Course Production Workflow
- How to make it go (tech details)

# Why do we do it this way?

Course teams want to:

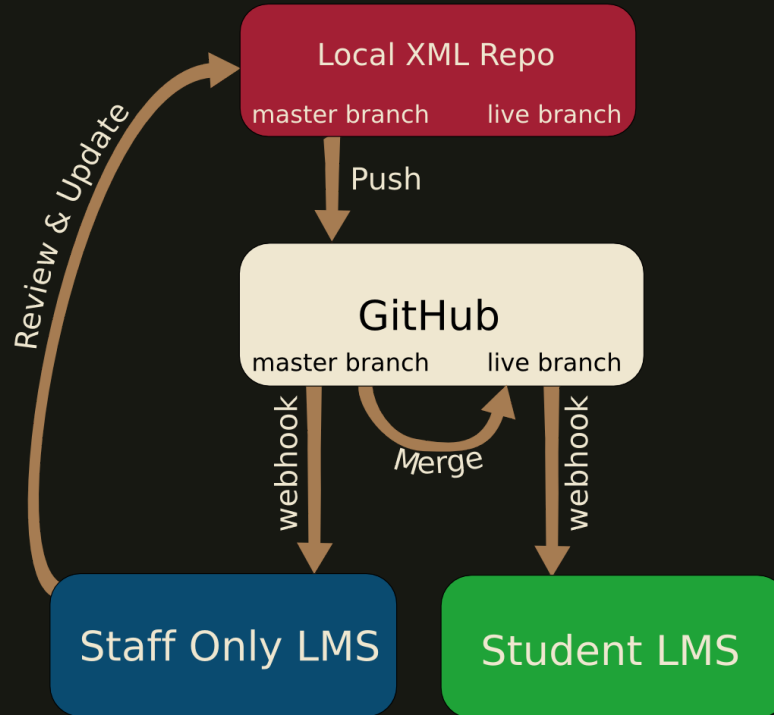

- use familiar tools
- migrate content
- manage versions
- manage multiple contributors
- preview and release

# Why do we do it this way?

Admins need to:

- help course teams, safely
- bulk updates
- move courses from staging to production
- archive (and restore) courses

# XML Course Development

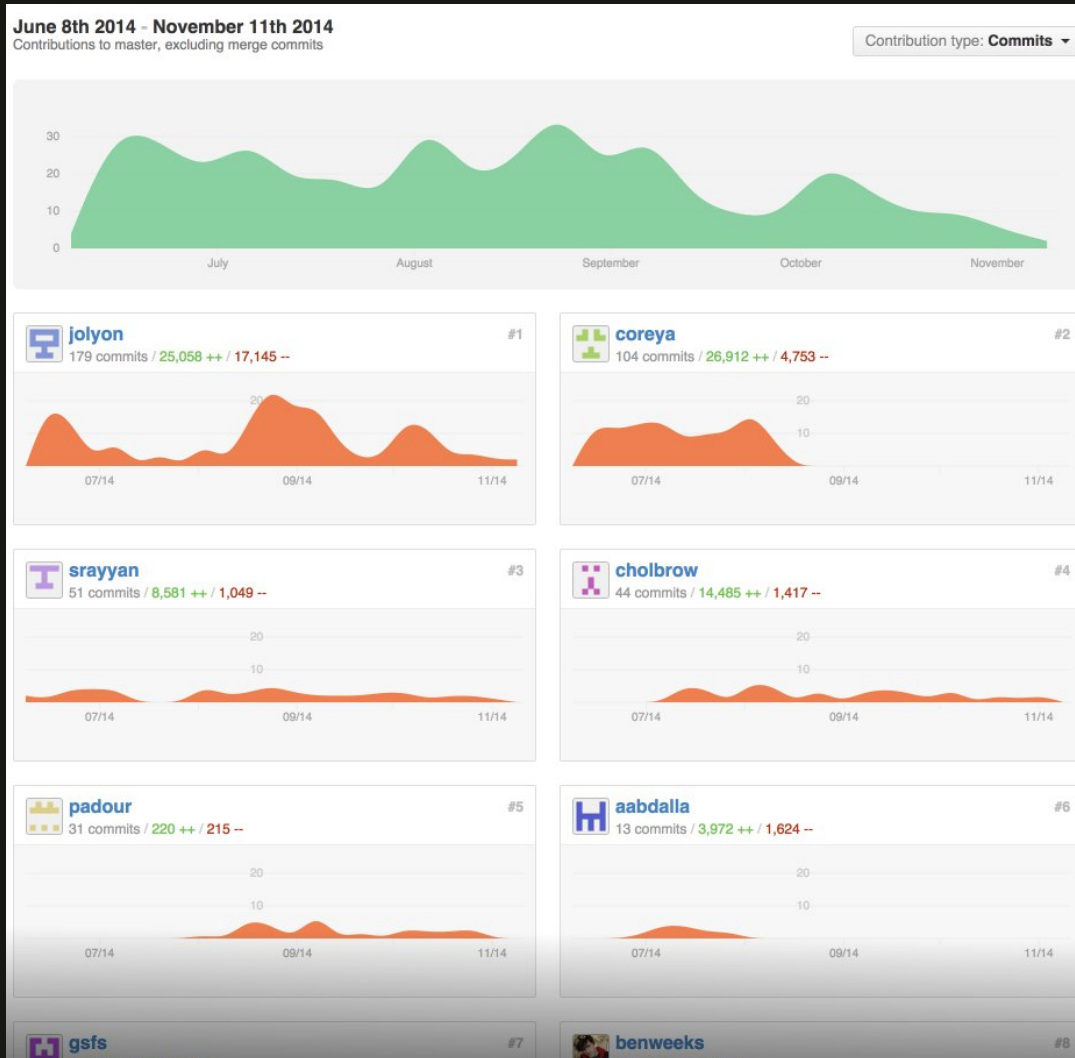

# XML Course Development

1. edit XML
2. commit and push to master branch
3. trigger → updates course on staging server
4. review on staging, repeat as necessary
5. merge to live branch
6. trigger → updates course on production server

# example commit graph

# example PR with comments

made two typo fixes (LS23-15b and LS25-15a), also updated code formatting for old LS26 problems #80

**Merged** jtriley merged 3 commits into 3091sandbox from master 5 days ago

Conversation 6 Commits 3 Files changed 16

**dicksonw** commented 6 days ago

updated code formatting was just tabs so the LS26 updates shouldn't affect anything

**dicksonw** added some commits 7 days ago

- updated formatting of code in old LS26 problems to match current form... f95fcaa
- fixed typos in LS23-15a and LS25-15 by creating \*b and \*a version, re... 05eea6c
- accidentally typed incorrect suspension problem, changed it 6ee90e9

**jtriley** commented 5 days ago

@pdpinch This will require `reapply_extensions` xsifier. There are extensions for LS23 but no extensions for LS25.

**jtriley** commented 5 days ago

@pdpinch LS26 starts tomorrow (11/7) so should be OK to modify those problems until then.

**jtriley** commented 5 days ago

LGTM

**pdpinch** commented on the diff 5 days ago

**pdpinch** added a note 5 days ago

Why is he adding and suspending LS23-15a ?

**jtriley** added a note 5 days ago

# Studio Course Development

# Studio Course Development

1. author course on studio server
2. review on staging server, repeat
3. export to Git
4. trigger → updates course on production server

# Technical Implementation

- Course Import and Export via Git
- Workflow Automation

# Git Course Import via Command

```
sudo su - edxapp -s /bin/bash
. edxapp_env
mkdir /edx/var/edxapp/course_repos
python edx-platform/manage.py lms --settings=aws \
git_add_course http://github.com/edx/edx-demo-course
```

## Options

- Directory to check out into
- Branch to use

# Sysadmin Dashboard Import

Enable with:

```
ENABLE_SYSADMIN_DASHBOARD=True
```

flag in FEATURES dict

- Head to:

# Git Course Export via Command

```
sudo su - edxapp -s /bin/bash
. edxapp_env
mkdir /edx/var/edxapp/export_course_repos
cd edx-platform
python manage.py cms --settings=aws \
  git_export edX/DemoX/Demo_Course \
  git@github.com:carsongee/edx-demo-course.git
```

## Options

- username (for commit authorship)
- repo\_dir (specify location of local repo location)

# Export to Git in Studio

Enable with:

```
ENABLE_EXPORT_GIT=True
```

flag in `FEATURES` dict

- Set `giturl` in course's advanced settings

GIT URL

"git@github.com:edx/edx-demo-course.git"

Enter the URL for the course data GIT repository.

# Export to Git in Studio

The screenshot shows the edX Studio interface for a course titled "edX DemoX" and "edX Demonstration Course". The top navigation bar includes "Content", "Settings", and "Tools" (which is expanded to show "Checklists", "Import", "Export", and "Export to Git"). The "Tools" section is titled "Tools" and "Export to Git". Below this, a message states: "Use this to export your course to its git repository. This will then trigger an automatic update of the main LMS site and update the contents of your course visible there to students if automatic git imports are configured." A large blue button with a download icon and the text "Export to Git" is prominently displayed. To the right, the "Your course:" section shows the course ID "edX/DemoX/Demo\_Course" and the "Course git url:" as "git@github.com:edx/edx-demo-course.git".

Tools

## Export to Git

Use this to export your course to its git repository.  
This will then trigger an automatic update of the main LMS site and update the contents of your course visible there to students if automatic git imports are configured.

Export Course to Git:

 Export to Git

**Your course:**  
[edX/DemoX/Demo\\_Course](#)

**Course git url:**  
<git@github.com:edx/edx-demo-course.git>

# Workflow Automation

Enter gitreload:

<https://github.com/mitodl/gitreload>

- Responds to hooks from github/gitlab
- Runs `git_add_course` from hookshot
- Only operates on courses already checked out

# Installing gitreload

Try before you buy:

```
sudo su - edxapp -s /bin/bash
. edxapp_env
pip install gitreload
gitreload
```

Install for realies with Ansible:

```
- hosts: all
  sudo: True
  vars:
    COMMON_ENABLE_BASIC_AUTH: True
  roles:
    - gitreload
    - role: nginx
      nginx_sites:
        - gitreload
```

# Who needs ContentStore?

- Setup shared filesystem for course storage
- Symlink to:

```
{{ edxapp_data_dir }}/course_static
```

- Set `GIT_IMPORT_STATIC=False`

# Who needs ContentStore?

Add to static nginx server rule:

```
location ~ ^/static/(?P<file>.*) {  
    root {{ edxapp_data_dir }};  
    try_files /staticfiles/$file  
              /course_static/$file =404;
```

Changes to:

```
location ~ /static/((?P<dir>[^/]+)/(?P<file>.*)(?P<rfile>[\w\d\-.]+)) {  
    root {{ edxapp_app_dir }};  
    try_files /staticfiles/$dir/$file  
              /course_static/$dir/static/$file  
              /staticfiles/$rfile =404;
```

# Conclusions

## The Good

- Simple and safe to publish to students
- Social course development w/ github
- Versioned per course backups gratis
- Support of multiple student LMS targets
- Better courseware debugging

# Conclusions

## The Bad

- More complex setup
  - git hooks
  - repository creation
  - manual first checkout
- Extra step for Studio courses
- Did the hook work?
- Easier to break courses when editing raw XML

# Future Work

- Create RESTful token auth Course Import/Export API
  - Studio and LMS
- "Create a Course" Application
  - Automatic course/repo creation
  - Initial LMS import
  - Hook setup
  - "giturl" setting

# Questions?
